

## Project Related Artifacts

### Anomalies Found in the Data:

**Missing Data:** There are instances where multiple columns have incomplete or missing information, indicating gaps in the dataset.

**Quality Control Failures:** Certain entries have failed quality control tests, standing out among predominantly passing results.

**Incomplete Entries:** Some records lack essential manufacturing or assembly details despite being present in the dataset.

**Duplicate Information:** Instances where certain identifiers or data fields appear more than once, indicating potential duplications or data entry errors.

**Inconsistent Formatting:** Varied formatting within columns, such as inconsistent currency symbols or decimal representations, can be observed in certain fields.

**Missing Manufacturer/Component Details:** Some entries lack specific manufacturer or component information, leading to incomplete records.

**Incomplete Assembly Information:** Absence of assembly plant IDs despite having manufacturing and quantity details, suggesting incomplete assembly data
